VINYL WORX

Product Data Sheet - Ultra Flashing & Clip

OnDek Vinyl Worx, Ultra Flashing & Clip design was introduced in March 2020 to our Distributors and Dealers group.

One of the most common issues with the standard U-Channel clip design is that in extreme cold/hot weather conditions, the standard clip would **FALL OFF** or sag on the flashing causing a service callback .

Our Ultra Clip incorporates a unique barb design that snaps onto the back of the flashing/membrane ensuring the clip will not sag or fall off. Our custom manufactured flashing is designed with an open-back hem that allows the clip to permanently snap to the flashing. The clip will never fall off the flashing/membrane eliminating callbacks.

The Ultra Clip is designed to divert water from the deck face of the flashing detail.

The combined Ultra Flashing & Clip design is perfect for commercial and residential projects alike. Our Ultra Clip incorporates built in UV inhibitors and prevents contraction and expansion of the clip.

Our Ultra clip is available in 2 standard colors, Grey and Beige.

Key Benefits: Designed with an internal barb to ensure it won't fall off, built in UV Inhibitors, designed to shed water, built in diverter and minimal contraction & expansion.
